1. Open Wireshark.
2. Select the network interface (e.g., Wi-Fi or Ethernet).
3. Start capturing packets.
4. Perform some network activity (e.g., open a website or ping a server).
5. Stop the capture.
6. Use display filters to view specific packets.

Example display filters (Wireshark filter code):

```
http          // to capture HTTP packets
tcp           // to capture TCP packets
udp           // to capture UDP packets
ip            // to capture IP packets
dns           // to capture DNS packets
icmp          // to capture ICMP packets (e.g., ping)
```

Output:
